make decisions both individually and collectively. Impact of such capacity on the overall cultural change will likely not have raised a pressing subject of speculation and discussion among the academic circles. However, an independent global assessment organization is yet to be constituted.

Global Impact of Technology

The United States has already established a world computer market and made a firm intention to continue to expand its digital technology leadership. A limited growth for computer network is inevitable. When viewed in this respect, one can anticipate the hyper-technological development based on three dominant Western nations, which are likely to be concentrated in computer and software industry.

As well as the fast diffusion of network technology, and the international network attempt to avoid the penalties of being fully dominated too domestic market by a few of science and technology, international network from such development of the world network will be expanded through social interaction. However, we believe that even in this regard, the fact remains that the Western domination of technology and the very dominant position of the countries have developed.

Therefore, IIT is noted for its sector that science and technology violate safety, security, peace, justice. Digital computer system developed by Fuller (in 1940s) and the computerized mechanism for a type of technology goes into systems, processing, network. Technology development in the form of primary development of social science, which will be a series of effects and its gradual change.

The broader scope, however, requires policies to support the development of the technology which requires support from the factors of production. The government has to ensure the means of production and capital of the world. The policies are necessary to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy.

The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy.

The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy.

The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy. The government has to ensure the growth of the technology and to ensure the growth of the economy.

rate noted the group of exceeding that of the agricultural population. The same group is also noted for the situation in which the number of workers in 1970 was 100 million but doubled that of those in non-chemical industries. It is an indicator of the degree of intensification in industrialization that the country pursued.

In the early 1960s, the emphasis on industrialization was placed on development of the light industries and later moved toward establishing the heavy and chemical industries up to the later 1970s. The concepts and suggestions that resulted toward the knowledge-oriented, innovation industries and which can form the basis of the relevant strategies have been investigated.

In quite January 1979, we are now moving toward the Third Five-Year Plan. The Second Five-Year Plan is launched by the independent revolution and socialist transformation, the synchronization right in 1980 to centralization, specialization, and concentration. It is a scientific, technical, and cultural revolution that governs the daily lives and the social development of the people. Now, we are in the process of being ready to enter the 1980s and to complete the early implementation of the new the industrialization and the modernization of agriculture and technology.

Legal Work Toward Industrialization

As we move in the practice of socializing, it is in the second half of the century that the government's objective is to be the development of a new type of

active flow of information exemplified in the course of such policy in implementation will serve as the indicator of the level of information society. In general, information index is measured by information level in society in terms of five information figures combined: information volume, information equipment rate, level of information society, size of information equipment manufacturing industry including computer industry and information level for home use. The information index is measured to be based on Korea's 100 in 1981.

(Standard Year: Korea's 1981)

Year	Korea	USA	Japan	United Kingdom	West Germany
1970	35	1,117	202	190	176
1971	39	1,188	251	205	173
1972	41	1,248	328	264	194
1973	44	1,337	397	226	228
1974	45	1,406	445	231	237
1975	54	1,782	491	272	272
1976	60	1,654	475	241	274
1977	68	1,517	518	244	287
1978	78	1,300	592	277	281
1979	83	2,165	620	303	366
1980	100	2,331	634	302	373
1981	100	2,247	500	313	306
1982	105	2,530	702	323	350
1987	120	3,629	874	340	380
Korea's %					
1970-1980	240%	240%	350%	180%	220%

The above Table of Information Index reveals Korea's information level in 1987 is 120% more than that of 1970 for other countries and Korea's information level in the same year is quite very widely apart from those of other countries.

Korea's Information Index

year	Inf. Volume	Inf. Equip. Net	Level of Inf. use	Inf. factor	Inf. eqpt. industry
1970	34	16	33	71	8
1971	39	18	36	80	9
1972	59	20	37	84	9
1973	65	22	39	92	11
1974	85	27	44	98	17
1975	98	48	47	91	21

The project, called the National Administration and Information System (NAIS), is a sub-project of the National Administration and Information System (NAIS) project. It is composed of 5 units, namely, the national administration information network, the finance and computer network, the education and research network and the national defense and public security network. The plan is to complete each of these units project by the mid-1990s and have the integrated network by the year 2000.

In a relatively short span of time, over one and half decades, Korea has undergone a rapid social transformation from an agriculture to an industrial society.

from rural to urban, from illiterate to high literacy, all in all, from extreme poverty to a relative affluence. It took the absence of competing development through education as means of expediting industrialization and national development. You could argue with the thesis that educated manpower is an essential prerequisite to national development.

If you examine the Korea, to have a pool of illiterate and uneducated people who are easily amenable to education and training. Lack of natural resources, the capital, and the technological know how had to be compensated by the productivity of the educated manpower in skill intensive or brain intensive operations. Electronics, machinery, and shipbuilding industries have been launched largely through competitive international advantages provided from the competitive productivity of technical manpower (Choi 1978).

Education today has brought the literacy rate up from around 50 percent at the end of the Korea War (1953) to virtually 100 percent. When the society as a whole and the schools are preoccupied into the process of exceeding the goal of 100% literacy, schools are seeking only to impart the language and the necessary curriculum, rather than to impart the lessons of the essential qualities of life. As the curriculum, as have youth with steady education receiving only material accumulation and individualism, void of moral principles and virtues. It is generally known that a surprisingly increased rate of subsequent delinquency and crime is attributed to their rudimentary exposure to negativities of the work world, generalities and social adaptation to the needs of industrialization.

Impact of Technology on Media and Culture

We know that there are many instances in which mass media of the nation are not completely free from all political controls, and that mass media of each nation in the world are placed in subordinate or parasitic relation to political power and the other being independent from it. The mass media in Korea had been under an extremely strict control of the political power.

Despite the control of mass media by the political power, in the course of rapid pace of development and modernization, and in the face of extensive cultural exchange or international traffic of trade, the nation experienced unprecedented degree of social values, shared tastes and shared changes from abroad culture in human society.

Actually, mass media brought the news to readers, however, proliferation of mass media subjected editors at the same time. As a consequence of these, quality and responsibility in production of news and other various cultural materials in the form of an instant and popular culture is apparent to an extent of causing decay of the genuine quality of culture.

In this study, a question facing the forward is not whether, being affected a culture of change in the trend of industrialization and high technology, they are able to obtain an original quality of traditional culture as a golden treasure and a source of creative inspiration for modern culture, or not.

15

It is generally noted that the era of the direct world communication network was commenced in early 1970s in which ethnocentrism and xenophobia became no more adaptable in the underdeveloped East than in the relatively overdeveloped West (Suhomun and Luzner 1978). In the same token, notion in the dichotomy between spiritual East and material West was in vogue to many observers and attainment in material goods was ever more valued as if such trend were taken for granted as the global developmental model.

Contrary as opposed to nature is the concept I adopt and of the very definition of popular culture, I will follow the view to define it in terms of the mass mediated forms of entertainment and amusement generated by capitalist investment. These new forms are opposed to the traditional popular folk art in which there is no fundamental division between audience and performer and their meanings are produced and shared by all those who participate in it.

Popular culture or mass art as opposed to the genuine art is the product of the commodity in which the mechanized working processes brought the industrial revolution. For its genuine characteristics, Loewthal (1961) named standardization, stereotypes, conservatism, mendacity, and non-probating to be the manipulated consumer goods.

Essence of the popular culture, according to the view held by the cultural theory, that (Baudrillard et al) is not based on the taste of the mass but on the taste as fed to the masses as a specific outgrowth of the technological, political, and economic conditions and interests of the masses who control the

production. In short, popular culture simply can become a way of holding political autocracy by other means.

In Korea, a phenomenon of cultural explosion was observed emerging in the later 1980s in which an explosive proliferation of popular magazines and incorporation of commercial radio and television broadcasting networks in multiple number were recorded. What Toffler called culture consumers also emerged: seeking products of high culture and elitism in cultural tastes.

However, the forms of cultural expression were predominantly placed under the control of the government agency. This was primarily because the electronic media facilities were imported by foreign exchange fund of the government and acts of production depended heavily on the major sources of supply of such equipment and facilities, namely, the United States and Japan.

These are the two countries known for their commercial products of 1940s-1950s, void of transcendent spirituality but entertainment and consumerism as depicted by Horkheimer and Adorno (1972). As Oscar Wilde pointed out "life is imitative art," rather than the other way around, "real life" soon began to take on a humorous flavor as depicted out by Orwell (1949).

Particularly when the government in the authoritarian regime took hold the media manipulation, presentation of the programs flavored with the bourgeois values and concepts through television and radio in everyday repetition as if such were the function of mass media. That the inflated version of sex and violence, the

prominent feature of the present day American culture. Finally some into conflict with the indigenous culture was a rather natural consequence. This situation led to widespread social protest organized by the intellectuals and religious institutions against the central government policy of monopolizing the major electronic media and the press. In this respect, a domestic policy shift toward democratic reform has been in effect since early 1978, following the general election in which the combined opposition parties defeated the ruling party.

Equation of Exclusion

The book by Adams et al., often called the Berkeley group, The Authoritarian Personality (1950), is still recognized as important to the study of authoritarianism despite the criticism and for is branded as "too psychological" and "biased". The book was designed to throw light on the ethnically prejudiced personality.

The Berkeley group found strong correlations between anti-Semitism, racial attitudes towards other minorities, and a narrow, aggressive loyalty to the national majority ("majoritarianism"). They called the combination of all these things "authoritarianism" and their most important studies of personality investigated the relationship between these high and low on authoritarianism (Forsler 1985).

They argued that authoritarianism is a characteristic expression of subjectivism and that authoritarianism is a defect of personality caused not by any particular group situation, but by the strain of modern capitalist society. To quote a syndrome of the authoritarian, the book was quoted in part from the book by 211.

- a. Conventionalism. Rigid adherence to conventional, middle class values.
- b. Authoritarian submission. Submissive, uncritical attitude toward moral authorities of the ingroup.
- c. Authoritarian aggression. Tendency to be on the lookout for, and to condemn, reject, and punish people who violate conventional values.
- d. Self-censorship. Opposition to the self-interests, thoughts, etc. of the under-privileged.
- e. Superstition and stereotyping. The belief in mystical determinants of the individual's fate; the disposition to think in rigid categories.
- f. Power and "toughness". Preoccupation with the dominance-submission, strong-weak, leader-follower dimension; identification with power figures.
- g. Distrust, cynicism and cynicism. Generalized hostility, vilification of the human condition.

I have no intention to make an extrapolation. At this point, I will only be reformulating my contention that the syndrome of ethnocentrism is rather deep rooted in cultural ingredients of a nation. In this context, citing the two instances of Vietnam and Korea is sufficient.

In case of the communist Vietnam and China were considered in ideological matters up to the time of downfall of Putschism in 1976. It was from then that Vietnam was unified under the communist party in which, party started to regard the residents of ethnic Chinese origin.

These people were deprived of their property and forced to leave the country without any means of transportation provided for them. Only transportation provided by the Vietnamese government for such purpose was that of expelling them and that the residents of Chinese ethnic origin were vilified by capitalistic ideology.

When Wang Qi (1875-1929) wrote "The founding of Vietnam" (1914), he
 was the first to point out that China is the land of a vast state long under her
 domination. It was noted in his writing that 200,000 ethnic Chinese were residing
 in Vietnam. After almost one hundred years later, ethnic Chinese immigrants were
 cultured based on their roots from Vietnam.

After I date the beginning of similar ethnicities evolution beginning in
 Korea. I still believe about the founding of her modern history as a political
 independence in 1948 must be noted for the emergence of political and
 administrative power of the people, both the leaders and people alike. In Korea,
 the year 1914 was commemorated for the anniversary of the first Korean national
 history records, however, when the first case of the Korean culture came to the
 coast of the Korean peninsula there was local organized resistance to the idea of
 Korean thoughts by local religious groups. Many tried to force their own
 preservation and Korea developed a "hermit kingdom".

The year 1945 was commemorated for the anniversary of the first national
 independence of Korea. When they arrived at the initial stage of their
 development in the country, realizing that the South peninsula could be considered as
 the only region for foreign trade and shipping. As noted the emergence of the
 culture in the Korean peninsula was tragic indeed, among war and suffering.

The Korean war was a tragic history in testing the resilience of the Korean
 people's courage in the latter nineteenth century. And the history was Korea's
 political culture of independence and nationalism as a result of Korean

ethnographic research, 1950s, among other nations in the region, information, and geography of administration

The latter authors, however, argue that the 1940s were not a time of stability, but rather a period of transition and change, with the 1940s being a period of political and social change, and the 1950s being a period of political and social stability.

The present study, however, despite its limitations in length, the amount of data collected, and the quality of the data, is a significant contribution to the understanding of the political and social changes in the region during the 1940s and 1950s. The study also provides a detailed account of the political and social changes in the region during the 1940s and 1950s, and the impact of these changes on the region's development.

economic basis. They were economically exploited, oppressed and deprived of their property claims in the course of the urban redevelopment projects.

In the main, the ethnic Chinese residents have not been in any way helped in the protection of their own rights. This was further aggravated by the fact that the restructured strategies of Korea moved forward in exclusive development in suburban areas. In the course of the national development plan, there are no fulfilled ethnic Chinese residents' demands without seeing any progress that they have made and are forced to move to the periphery of the city of Seoul. In the long run, the lack of intercultural communication and exchange in the instances.

My Mind of Impermanence, Epilogue

Heart of the global communication network is gradually allowing the way in which things flow, which will interact with others through their cultural and technological, the crucial question remains whether or not the 'otherness' and 'difference' will emerge a drastic transformation because of such profound changes.

At the same time, the issue of the restructured ethnic Chinese residents' demands is the form of ethnic identity and culture or extreme nationalism. In the long run, the most important is deep rooted proposal to bring people to integrate the multicultural of relations. There is a great amount of the satisfaction in the context of the development of multicultural.
